Nous rendons hommage au peuple algonquin, gardien traditionnel de cette terre. Nous reconnaissons le lien sacré de longue date l'unissant à ce territoire, qui demeure non cédé. Nous rendons également hommage à toutes les personnes autochtones qui habitent Ottawa, qu'elles soient de la région ou d'ailleurs au Canada. Nous reconnaissons les gardiennes et gardiens des savoirs traditionnels de tous âges. Nous honorons aussi leurs dirigeantes et dirigeants d'hier, d'aujourd'hui et de demain, au courage indéniable.

We pay respect to the Algonquin people, who are the traditional guardians of this land. We acknowledge their longstanding relationship with this territory, which remains unceded. We pay respect to all Indigenous people in this region, from all nations across Canada, who call Ottawa home. We acknowledge the traditional knowledge keepers, both young and old. And we honour their courageous leaders, past, present and future.

Message from the president

We are all aware that climate change is challenging the entire global community, causing more frequent extreme weather events, rising sea levels and risks to wildlife. Without action, our planet's climate will continue to fluctuate, with a devastating impact to which no one will be immune. There is substantial work to be done.

Institutions of higher learning have an active responsibility to prepare students and society to mitigate and adapt to climate change. From our teaching programs to our experiential learning opportunities, from the dissemination of our research to our interdisciplinary collaborations with NGOs and community groups, we must make every effort to educate, inform and engage. At the University of Ottawa, we are focused on creative solutions. We are continuously taking inventory of what we offer, how we work and in what way we can better ourselves and elevate our contributions. Climate action and reducing our carbon footprint through sustainable actions remain top of mind. This is evident in our decision to divest from fossil fuels, in our vision to become a zero-waste campus and in the growth of our greenspaces — we are striving to rise to the occasion and persist in our efforts to support positive climate outcomes.

Jacques Frémont

Climate at the heart of learning

The University of Ottawa recognizes its role in advancing knowledge about climate change through its academic programs. Our holistic approach to addressing climate change means not only focusing on what is taught in the classroom, but also leveraging other learning and research vehicles available. By offering a variety of learning opportunities, we can broaden and strengthen knowledge about the changing climate and how it affects the people on our planet. We can equip our students with the knowledge and tools they need to find and implement solutions to the climate crisis.

In 2020, the COVID-19 pandemic brought most of the world to a standstill. Although some activities were severely reduced, the University of Ottawa continued its essential research in person, while courses were delivered online. The University was able to pivot and offer additional learning opportunities, which included sustainability- and climate-related themes.

Teaching program

Learning about climate change through course content is one of the most important ways we mobilize knowledge for the campus community. Every year, dozens of courses are offered that focus on climate change (as part of 627 sustainability focused or inclusive courses offered). These courses cut across all faculties and help our students understand and frame the context of climate change today. In 2021, 59 courses were identified as having a focus on climate change. (See "Climate course inventory" in the appendix)

In 2021, our Faculty of Arts introduced the first program in Canada on the Anthropocene, a special microprogram investigating the human impact on the environment, with a focus on biodiversity loss and climate change. This program is connected to the new University Research Chair on the Urban Anthropocene held jointly with the Université de Lyon's École urbaine. This program is an example of how uOttawa is adapting its academic offerings to reflect the need to learn more about the climate crisis and help our students rethink our impact on the planet while searching for new solutions.

Research activities

As one of Canada's most researchintensive campuses, the University of Ottawa is making efforts to understand the impact of the warming environment, moving beyond the classroom into the laboratory and out into the field. This continues our proud tradition of research founded on excellence, relevance and impact. University researchers are working to understand how to reduce our contribution to climate change and how our changing environment will affect the broader economy, the natural world and the places where we live.

Between 2020 and 2022, researchers at the University of Ottawa published 40 research papers relating to climate change. The topics covered range from the physical impact of climate change on the environment to the ways climate change is understood by Canadians. Members of the University of Ottawa's Positive Energy group (part of the Institute for Science, Society and Policy) authored the majority of this research. *(See "Climate published research" in the appendix.)*

In terms of active research, there are currently 138 projects related to climate change, totalling over \$16 million in funding from various granting agencies. This research runs the gamut from the evolution of Arctic governance, to studying tick population changes, to food security issues related to climate change. It is at the forefront of climate knowledge, both in the Ottawa region and elsewhere. It is helping researchers map the impact of this climate crisis, and helping the public better understand how to adapt. (See "Active research projects" in the appendix.)

Research chairs

University of Ottawa research chairs support research excellence and knowledge creation aligned with our strategic priorities. There are 13 research chairs at the University working on topics either directly or closely related to climate change. Their innovative research is helping to inform policymakers and improve society's understanding of the impact of the changing climate across many disciplines. (See "Climate-related research chairs" in the appendix.)

Trevor J. Hall

Carolynn Fischer

Kelly Bronson

Anthony Heyes

Support for research

The uOttawa Library supports research at all stages of the research cycle, including on climate change, through geographical information systems and data support, knowledge synthesis services and literature searching. The Library's collection includes many journals, films, databases and other resources that support climate change research. Some notable sources include the CABI Environmental Impact database, the Global Environmental Justice documentary and film collection, and journals like Nature Climate Change, Science of the Total Environment and Climatic Change.

Additionally, the Library provides access to innumerable interdisciplinary databases covering related topics such as earth sciences, geography and political science. Some examples of these resources include Web of Science, SCOPUS, the Environmental Studies and Policy collection, Geobase and GreenFILE.

Experiential learning

There are many forms of learning. The University of Ottawa embraces experiential learning, which offers students a unique opportunity to engage with subject matter and course work in a more hands-on way. The Community Engagement Group at the University of Ottawa offers a variety of community service learning placements and extracurricular volunteering opportunities. This benefits students, while allowing community members to benefit from students' involvement.

Between 2020 and 2022, there were 250 placements relating to sustainability and climate change. Students filled 1,396 separate positions supporting the work of 68 universities, NGOs and community groups. This offered students the opportunity to critically reflect on the impact of climate change. (See "Climate-related Community Service Learning placements" in the appendix.)

Dr. Glen Kenny's research related to climate change for the Faculty of Health Sciences has been instrumental in creating new and advanced knowledge, monitoring technologies, policies, standards and guidelines for physical activity and work in hot environments, including exposure limits, hydration requirements, clothing systems, cooling interventions and heat management strategies. Over the past 10 years, Dr. Kenny has attracted a yearly average of \$780,000 in research funds.

One of the Faculty of Engineering's five pillars is sustainable, resilient infrastructure. Faculty researchers work with sustainability in mind. Their goal is to reduce our environmental footprint and be faithful stewards of our planet and its people.

Engineering researchers work with industry and other partners to find solutions in areas such as net zero buildings, sustainable materials, renewable energy, transportation systems, CO2 capture and storage, and communications networks. We estimate that half of the faculty's \$9.5 million in research funds is tied to climate change-related research.

In 2021, as part of its 2020–2025 Strategic Plan, "Leading Innovation for a Healthier World," the Faculty of Medicine launched a planetary health initiative, appointing Dr. Husein Moloo as its director of planetary health. This was a first in North America for a medical school. It was received with great enthusiasm from internal and external stakeholders, with some media coverage.

Since then, numerous ongoing projects have emerged from a research, educational and advocacy perspective, including a Planetary Health Council involving all faculty departments, integrating planetary health longitudinally into the medical school curriculum and creating a Faculty of Medicine internal grant program for Green Ideas in Research.

The dean of the Faculty of Education helped co-author the Accord on Education for a Sustainable Future, a call to action for faculties of education around the country.

"We, Deans, Directors, and Chairs of Education from all regions of Canada are deeply concerned about the climate emergency and environmental crisis. Local, regional, and global air and water pollution; extractive technologies; accumulation and distribution of toxic wastes; destruction and depletion of forests, soil, and water threaten the survival of the planet, the integrity of the earth and its biodiversity, the security of nations, Indigenous peoples, and future generations."

Mobilizing knowledge and inspiring the community

External Relations (Office of Communications and Government Relations — OCGR)

Through various fundraising communications and media relations initiatives, including research promotion, the Office of Communications and Government Relations is helping the University of Ottawa community in the fight against climate change by ensuring that the University's expertise on this matter is felt around the globe.

Although COVID-19 affected the ability of the University to provide in-person social programming, events were still held virtually to keep the community engaged, including a workshop offered during Wellness Week (and on other occasions) with alumna Valérie Leloup, founder of Nu Grocery, Ottawa's zero-waste grocery store, which helped the community learn how to live sustainably. In 2021, the University of Ottawa celebrated Earth Day in a big way, and External Relations helped take the lead by highlighting the work of four sustainable companies that have sprouted out of uOttawa. The fingerprints of the tremendous climate work of uOttawa alumni are visible all over Ottawa.

Read more: <u>4 Sustainable Companies That</u> <u>Have Sprouted at uOttawa</u>

Promoting uOttawa's climate researchers and experts

Throughout the year, the media team promotes our research and our experts able to comment on current events. Over the past two years, the pandemic took over the narrative, but the University still promoted its climate and environmental research and experts to media on occasions such as Earth Day, COP meetings, IPCC reports and elections (environmental issues, climate change and environmental strategy of political parties), for a total of over 50,000 media mentions.

In summer 2022, the uOttawa media relations team devised an aggressive media outreach strategy focused on the impact of climate change. A climate change special edition of the Gazette was created to position the University as a thought-leader and source of invaluable research on this matter. It was a mix of expert commentary and research promotion that looked at topics such as heat waves, droughts, climate anxiety, melting glaciers, sustainability and government policies on climate. It resulted in some nearly 9,000 mentions across the globe, including in the U.K. (The Guardian), France (Le Monde), and the U.S. (New York Times). This resulted in a 71% increase in mentions versus the same time the previous year.

Notably, the first major contribution to the uOttawa reIMAGINE campaign was a \$2 million donation from the Jarislowsky Foundation to create a new Jarislowsky Chair in Clean Economy and Innovation. The University matched the contribution, making for a total of \$4 million, surpassing the Clean Innovation Research Fund's goal. This research chair is an activist chair that will help the University influence economic policies that deliver real-world solutions to the challenge of transitioning to a low-carbon economy.

Read more: <u>Clean economy and innovation</u> <u>chair tackles sustainable economic solutions</u>

Another major donation was made by the Gauthier Family to create the Sustainable Cities Initiative. This \$1 million donation will fund a five-year research program focused on achieving sustainable cities. The program will encourage interdisciplinary research that not only addresses challenges associated with a warming climate, but also look towards a more environmentally and socially sustainable urban future.

Read more: <u>University of Ottawa Faculty of</u> <u>Arts launches sustainable cities initiative</u> <u>thanks to \$1 million donation</u> External Relations also leads fundraising efforts for climate-related initiatives, not only for large donors, but also to support the smaller, but no less critical, programs across the campus. These funds help pay for learning experiences, research chairs and sustainability projects. Between 2020 and 2022, \$1.2 million was collected and distributed to 13 funds on campus. This is in addition to the \$3 million from the Jarislowsky Foundation and the Gauthier Family.

Leading the way on these donations is the Positive Energy group, which is doing the important work of bringing dialogue to the climate discussion. The group uses the convening power of the University to bring together academic researchers and senior decision-makers from industry, government, Indigenous communities, local communities and environmental organizations to determine how to strengthen public confidence in energy decision-making.

Smart Prosperity Institute

The Smart Prosperity Institute is a national research network and policy think tank based at the University of Ottawa. It advances thinking on innovation in policy and markets in pursuit of a greener, more competitive Canadian economy. This work helps not only to raise awareness about the climate crisis, but also to engage the community in creating wide-ranging solutions. Between 2020 and 2022, the institute published dozens of reports in the pursuit of its mission. This includes 25 reports focusing on climate, with another 23 strongly linked to climate. The institute also pursues a full suite of activities beyond research, including convening, government briefings, student training, funding research projects and more. (See "Smart Prosperity Reports 2020–22" in the appendix.)

Investing in our future

The uOttawa journey of responsible investing and climate change actions with regard to its long-term investment portfolios dates back to 2012, when we were Canada's first university to sign the United Nations Principles of Responsible Investing. In 2015, we were also the first Canadian university to sign the Montreal Carbon Pledge, committing to measuring and publishing the carbon footprint of our portfolios each year. The following year, in 2016, a comprehensive and holistic climate change strategy was established and approved by uOttawa's Board of Governors. This strategy included steps to gradually tilt the portfolios away from fossil fuels and establish a framework to measure shifts in this direction.

In 2020, along with 14 other universities, uOttawa pledged support for a new responsible investing charter, Investing to Address Climate: A Charter for Canadian Universities, which is aligned with our current efforts in this regard.

In 2022, the University announced the following fossil fuel divestment and climate change targets for our long-term investment portfolio:

- Divestment of all direct fossil fuel holdings in the equity portfolios no later than 2023 and divestment of all such indirect holdings, typically held through pooled and commingled equity investment vehicles, no later than 2030
- Continued tilting of the investment portfolio towards commitments to climate change initiatives across various asset classes, with a 10% target for the overall portfolios by the end of 2025
- Publication of the related achievements on uOttawa's website starting in 2022

The Finance and Treasury Committee will review these targets from time to time, to ensure the adequacy and relevancy for the overall goals and objectives of the investment portfolio.

The momentum and energy created around climate change efforts and activities is expected to be sustained in the coming years as conversations around mitigating the impacts of climate change continue across the University.

Measurement

To measure and track shifts in the longterm portfolios over time, the following measurements were identified by the Finance and Treasury Committee as appropriate indicators. The committee monitors annual progress against these measurements and includes new ones as necessary.

University's PRI ranking versus median respondent

As a UN Principles for Responsible Investment (UN PRI) signatory, the University is required to publicly report on the scope and level of responsible investment activities within its portfolios. The latest United Nations Principles for Responsible Investment (UN PRI) report available is the 2021 report (for the 2020 calendar year), the release of which was delayed to October 2022 due to reporting tool and other issues at UN PRI. Results were compiled and produced as part of a UN PRI pilot project whereby a different scoring method (star scoring vs. letter grade) was adopted. Note that the new 2021 scoring methodology prevents comparisons being made with prior years' results. The summary scorecard is available below; uOttawa's scores are in the median range of all respondents, with the exception of passive fixed income, based on additional information provided by UN PRI.

UN PRI Scorecard

Investment and Stewardship Policy	****
Indirect – Listed Equity – Passive	****
Indirect – Listed Equity – Active	****
Indirect – Fixed Income – Passive	****
Indirect – Fixed Income - Active	****

Montreal Carbon Pledge

As a Montreal Carbon Pledge signatory, the University submits carbon footprint data concerning its equity portfolio for an independent audit.

The following table reflects the reduction in uOttawa's carbon emissions since 2014 compared to a blended market benchmark. At the end of 2021, the carbon footprint for the long-term portfolios was 57.5% less than the market benchmark and had declined by 87% over the previous seven years. Index data remains difficult to interpret because carbon footprint calculations are based on index composition and weighted by market pricing. Since the measurement is still in its early stages, there are currently no industry standards in carbon emission evaluation. Data volatility also suggests that caution should be exercised in interpreting these statistics over the short term. However, more insight on relative performance is expected over time as industry standards are set and long-term trends established.

Reduced carbon emissions (t CO2e / \$M Invested) of the equities portfolio

ESG implementation in the portfolios

Another method of measuring progress is to assess the level of implementation of ESG (environmental, social and governance) factors throughout the portfolios on an annual basis. For 2021, the following observations can be made:

- On a dollar basis, approximately 98% of the portfolios is managed by investment managers who are PRI signatories (76% in 2019).
 - \rightarrow 100% of the equity portfolio (100% in 2019)
 - \rightarrow 100% of the fixed income portfolio (100% in 2019)
 - \rightarrow 84% of the real estate portfolio (63% in 2019)
 - → 100% of the infrastructure portfolio (100% in 2019)
 - \rightarrow 97% of the absolute return portfolio (N/A in 2019)
- Approximately 81% of the portfolios (48% in 2019) is handled by managers who have formally integrated ESG into their investment management processes; when factoring in managers who have informally integrated ESG, the figure rises to 85%.

As of December 31, 2021	% of portfolio	Formal integration	Informal integration	N/A
Equities	46.2%	46.2%	0%	0%
Fixed Income	23.4%	14%	0%	9.4%
Absolute Return Assets	13.9%	8.9%	0%	5%
Real Estate	7.6%	4.1%	3.4%	0.1%
Infrastructure	8.9%	7.7%	1.1%	0.1%
Total	100%	80.9%	4.5%	14.6%

Portfolio tilting

A total of \$104 million (9.7%) of the portfolios was invested in climate changerelated investments as of the end of 2021.

A carbonconscious campus

Emissions inventory

Understanding the source of your emissions is critical in charting a path to carbon neutrality. Knowing which sources are the most carbon intensive will help the University make strategic decisions about how to reach our goals efficiently and effectively. The University has set a goal of becoming carbon neutral by 2040 with respect to direct emissions. This means that we will reduce as much of our direct emissions as possible and, as a last resort, offset the emissions we cannot eliminate.

This year's emissions inventory was on track to be the most comprehensive to date, but it was interrupted by the pandemic and is now incomplete. Scope 1 emissions (created directly on campus) and Scope 2 emissions (created indirectly by the purchase of energy) were recorded; however, Scope 3 emissions (all other indirect emissions that happen down the value chain) are much more difficult to calculate. Across the board, emissions numbers are down on campus because of the reduction in activities. The challenge will be in keeping those numbers low as the community returns to the campus.

In past reports, the University has highlighted the work undertaken by Facilities to reduce direct GHG emissions created by the operations and maintenance of campus physical spaces. This work continues, but as we develop a better understanding of our carbon inventory, we can see how carbon creeps into all the materials we use on campus. Therefore, as a responsible institution, we are also addressing the carbon production beyond our direct emissions.

A reduction in both our electrical consumption and the intensity of carbon in the Ontario electrical grid helped lower our Scope 2 indirect emissions. Indirect emissions associated with Scope 3 activities are presumably lower due to fewer activities during the pandemic. This is evident when we look at activities such as business travel and waste generation, which were both down between 2020 and 2021.

The University is exploring green alternatives, which have become more accessible because of the pandemic. Teleconferencing, telework, telelearning and digital documentation are some alternatives that have had a positive impact on our emissions profile.

UPSTREAM

Infrastructure

For decades, the University of Ottawa has been a keen steward of its energy consumption, diligently working to reduce the amount of energy used on campus. This has helped keep campus emissions related to heating buildings from the Power Plant very low. Campus direct emissions dropped by 17.4% between 2019 and 2021 (from 20,018 to 16,530 tonnes) during the pandemic, when the campus was not fully occupied. Emissions are expected to rise as the community returns to the campus and normal activities resume.

Regardless, uOttawa remains the lowest emitting campus in the U15 for direct emissions and will continue working on driving down its emissions. (See "U15 Scope 1 Emissions" in the appendix.)

To support this effort, the University has committed to building greener buildings that use less energy. Since 2012, every building the University of Ottawa has constructed has been LEED certified, and a new LEEDcertified building is under construction at 200 Lees. Another building at the University of Ottawa's medical campus is being designed with climate as a key planning consideration. These buildings use less energy and prioritize the health and comfort of building occupants while incorporating design elements that will help adapt to the changing climate.

With a grant from Natural Resources Canada's Zero Emissions Vehicle Infrastructure Program, the University has installed 20 new Level 2 charging stations to offer campus community members a low carbon option for their commute. These new chargers are available to the public and join the current chargers used for uOttawa fleet vehicles.

Commuting

Traditionally, the emissions from commuting nearly equalled those created by natural gas combustion on campus. However, travel to and from campus was greatly reduced during the pandemic, as classes and office work moved online. Some programs were also suspended for public health reasons (carpooling, shuttle bus, etc.). These programs were reinstated in 2022 and the University has allowed for shared parking passes as well.

Once the return to campus was approved, uOttawa's Human Resources team implemented a telework pilot project, allowing employees to continue to work from home two days a week. This will continue to keep emissions low beyond the pandemic. The results of the pilot project will be reviewed in March 2024.

Human Resources is also playing a role in bringing more active transportation to the campus. Through the Healthy and Active Campus group, a University-wide pedometer challenge is organized twice a year to get everyone moving, promote physical activity and reduce our carbon footprint. This is supported by other monthly activities such as Bike to Work Month in May and Heart Month in February.

Waste management

Although waste management does not represent a large proportion of the University's emissions, it has an impact on downstream emissions. Many departments at the University have begun to dematerialize, which has the benefit of reducing emissions both up and downstream. Even before the pandemic, the Human Resources group had converted all its paper forms to online forms.

In 2022, the Office of Campus Sustainability revitalized the Furniture Reuse Program, recirculating surplus equipment and furniture on campus. Even though reuse does not reduce emissions like dematerialization, it does have a significant impact. Other programs such as the Free Store and incentives to bring reusable mugs on campus have been expanded for the return to campus.

During the pandemic, the University of Ottawa implemented a measure to install recycling bins for single-use masks in every building on campus, to respond to the dramatic increase in PPE use. Unfortunately, recycling is not as beneficial as reduction or reuse, though it is better than landfilling.

In general, waste production was down across the University because of the pandemic; nevertheless, there were many lessons learned about how the campus could function with fewer material inputs.

Food

Globally, the food system is responsible for over one third of GHG emissions, according to the United Nations. In 2022, the University of Ottawa's Food Services joined the Cool Food Pledge, a program designed to consider the climate impact of food by making meals more climate friendly. The goal is to reduce the greenhouse gas emissions associated with food by 25% by 2030 in a way that does not compromise the quality of meals.

This exciting program joins some of the great sustainability initiatives already undertaken by Food Services, including the zero-waste Dining Hall, Marine Stewardship Council certification, Green Dining certification and the acquisition of a Growcer unit.

Green space

Green space plays an important role in GHG emission sequestration, but also in adapting to climate change. The climate resiliency of the campus is strengthened when there is more green space to manage stormwater, reduce the urban heat island effect and offer habitat to animals and insects. To take advantage of these benefits, the University implemented design guidelines to build green roofs whenever possible, including the latest one, installed on Perez Hall in 2020.

Gardens are also taking a more prominent role in campus design. An Indigenous garden was inaugurated next to the Social Sciences Building, a three-season garden was constructed behind the University Centre and a pollinator garden was created in Marion Square thanks to a grant from the World Wildlife Federation.

Conclusion

We all have a vital role to play in the fight against the climate crisis and its devastating effects. As an institution empowered to educate future leaders, the University of Ottawa is helping prepare students for a rapidly changing climate. Moreover, as one of Canada's most research-intensive universities, we have many academics rigorously investigating the current and future effects of climate change and disseminating their findings.

The University of Ottawa will remain committed to leveraging its strengths to help reduce the widespread adverse impact of climate change with transformative, realworld climate solutions. I firmly believe in the leadership universities can demonstrate within our communities, and on the national and international stages. By sharing our knowledge and research, integrating sustainability into daily life on campus and nurturing the next generations of leaders, we can help to shape a sustainable society.
